## DETAILED ACTION

### *Continued Prosecution Application*

1. The request filed on 6/17/02 for a Continued Prosecution Application (CPA) under 37 CFR 1.53(d) based on parent Application No. 09/252,828 is acceptable and a CPA has been established. An action on the CPA follows.

### *Election/Restrictions*

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 48-49, 57-60, and 63-64 are drawn to a purified recombinant glycopolypeptide (product) of 65kd to 100kd that comprises 40% to 60% carbohydrate by weight capable of binding human spermatozoa, classified in class 530, subclass 322 and class 530, subclass 395 for example.

II. Claims 50-56 and 66-68 are drawn to a purified recombinant glycopolypeptide (product) having between 41 and 400 amino acids binding human spermatozoa including an active portion homologous with seq. id. No. 2, *which does not require a carbohydrate component*, classified in class 530, subclass 322 and class 530, subclass 395 for example.

III. Claims 61 and 62 are drawn to a glycopolypeptide (product), which binds human spermatozoa wherein the polypeptide portions is smaller than 25kd or 10kd and comprises seq. id. No.2, *not requiring a carbohydrate component*, classified in class 530, subclass 322 and class 530, subclass 395 for example.

Application/Control Number: 09/252,828  
Art Unit: 1641

3. The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01).

In the instant case, each of the different product inventions of Groups I, II, and III are distinct because they are drawn to diverse compositions representing independent and different compounds (having separate searchable limitations – i.e. different carbohydrate composition, amino acid length, kilo Dalton requirements, homology, glycosylation, etc). Therein the inventions are drawn to a plurality of patentably distinct compositions having diverse structural limitations/characteristics.

It is recognized that although the search for the inventions may overlap they are not totally co-extensive, where by the search for one would fully encompass the search for the others. Because these inventions are distinct for the reasons given above and the search required for each sequence is not mutually inclusive (i.e. the search for one invention is not required for the other inventions) restriction for examination purposes as indicated is proper.

Application/Control Number: 09/252,828

Art Unit: 1641

4. Because these inventions are distinct for the reasons given above and have acquired separate status in the art as shown by their different classification, recognized divergent subject matter and because the search required for each invention is not substantially coextensive with the search required for the remaining invention, restriction for examination purposes as indicated is proper. Please note that the classifications in the restriction are illustrative only and do **not** represent all the classes and subclasses which must be searched for each invention; nor is the search limited to issued US patents, but rather includes published foreign patents and applications as well as literature search, which in this case would be divergent for each of the claimed inventions.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventor ship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventor ship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
